Environment Variables

Summary

Env Var	Purpose
FASTBUILD_TEMP_PATH	Override system temp path for FASTBuild to use.
FASTBUILD_BROKERAGE_PATH	Set location of the Brokerage Path for distributed compilation.
FASTBUILD_CACHE_PATH	Set the location of the cache.
FASTBUILD_CACHE_MODE	Set the cache mode.

Details

FASTBUILD_TEMP_PATH

FASTBuild uses the system temp dir. This can be overridden by setting the FASTBUILD_TEMP_PATH. This can be useful in certain cases, such as when certain Anti-Virus software is used that prevents executables being spawned from the temp directory.

FASTBUILD_BROKERAGE_PATH

FBuildWorkers signal their availability by writing a token to the "Brokerage Path". The location of the brokerage path can be set via the FASTBUILD_BROKERAGE_PATH.

FASTBUILD_CACHE_PATH

The location of the FASTBuild cache can be set via the FASTBUILD_CACHE_PATH environment variable instead of via the .CachePath option in the <u>Settings</u> function.

FASTBUILD_CACHE_MODE

The cache mode can be set via the FASTBUILD_CACHE_MODE environment variable, instead of via the command line <u>-cache</u> options.
